Work history

Independent Consultor

March 2020 - Present
Software Engineer for multiple local companies such as TELAVOG and INTELECTUS SA.

As a part of professional growing, I was implementing software for multiple companies according to specified requirements.

Project:

Main responsibilities included:

INTELECTUS.- FrontEnd Developer for Ecuador Bank (BanEcuador), including the following responsibilities: Project Lead, Capacitor for customer programmers, Programmer in the whole project specially related with visual interfaces. The whole project was related to manager dashboards and data processes.

CIES.- FullStack Developer. A project related to Human Resources was completely developed according to customer needs. The main goal of the same was involved with the interface creation to manage vacations for the internal users, connecting internal processes between Human Resources employees and functionaries.

TELAVOG.- FullStack Developer. Internal assessor and project implementer to join the erp system with ecommerce database. The site actually is working in the following url: https://www.delyclar.com. Technology used was JavaScript.

CIES.- FullStack Developer. As a part of government regulations, a system for the Intelligence Department was developed to manage internal documents flow. The system was based on ReactJs and Symfony 3.4 .

Personal Project (FullSack Developer).- As a personal challenge together with a colleague. A documentary system was implemented that manages the complete flow of memorandums and documents including electronic signature. The system is called SGdox. (www.sgdox.com)

Technologies: JavaScript, ReactJs, Java, Keycloak, PostgreSQL, Symfony 3.4.
